

Decision Tree

This document describes the current decision tree for identified watchouts.

General

Models in Lifecycle

This decision tree is applicable for models in model-lifecycle.

It is not applicable for Launch models - within the phase between SOC and Market Launch.

It is not applicable for Runout models

- in the phase after the SOC of successor model,
- if there is no successor: in the phase after EOP

General Marketing Recommendation for Runoutmodels: if Stock Level is high, marketing / media push should be evaluated for Stock clearance.

Priorization of models based on sales volume

To prioritize model/market-combinations for marketing activities, evaluate the sales volume planned to ensure prioritization of top-volume models (per market), based on Full Year Budget:

- C1: Order Intake
 - C3/C4: Retail
-

Watchout Detection

IWVV Watchout

A case is treated as an IWVV watchout when **WEB**:

- contains **IWVV**, or
- contains a negative watchout marker such as **-1**, **-2**, or **-3**

Implementation note:

- Any **WEB** value containing a minus sign is treated as a negative-style watchout marker.

NVWR Watchout

A case is treated as an NVWR watchout when **WEB**:

- contains **NVWR**, or
- contains a negative watchout marker such as **-1**, **-2**, or **-3**

CRM Watchout

A case is treated as a CRM watchout when **CRM**:

- contains a negative watchout marker, or
- parses to a numeric value below **0**

Implementation note:

- Any **CRM** value containing a minus sign is treated as a negative-style watchout marker.

Sales Watchout

A case is treated as a Sales watchout when:

- **SALES < 0**

Watchout Duration

A watchout is treated as **>= 3 months** when any relevant watchout field contains **-3**.

Node A

A. Watchout in IWWV or NVWR?

- If **NO**: Proceed with **B**
- If **YES**: evaluate **A.1**

A.1 Is it a watchout only in IWWV, and not in NVWR, CRM, or Sales?

- If **YES**: Proceed with **D**
- If **NO**: evaluate **A.1b**

A.1b Is it a watchout only in NVWR, and not in IWWV, CRM, or Sales?

- If **YES**: Proceed with **B**
- If **NO**: evaluate **A.2**

A.2 Does the watchout exist for at least 3 months?

- If **YES**: evaluate **A.3**
- If **NO**: evaluate **A.10**

A.3 (Watchout in Sales and prediction does not indicate a chance) OR (prediction indicates a risk)?

Condition:

- (**Sales watchout exists** and **PRED != C**)
- OR **PRED = R**
- If **YES**: evaluate **A.4**

- If **NO**: Proceed with **B**

A.4 Is Cost per NVWR efficient?

Thresholds:

- **BEV** $\leq$ 200 EUR
- **NON-BEV** $\leq$ 100 EUR Mandatory additional condition:
- **Paid Share** (**IWV Paid** / **IWV**) $<$ 60% Evaluation behavior:
- Paid Share is evaluated even when Cost per NVWR is missing.
- If Cost per NVWR is missing, the cost condition is treated as met (efficient). **A.4** result then depends solely on whether **Paid Share** $<$ 60%.
- If **YES**:
 - Recommendation: Check potential increase of Media Activities (good media mix)
 - Proceed with **B**
- If **NO**:
 - Recommendation: Evaluate and adjust Media Mix
 - Proceed with **B**

A.10 Is prediction a chance?

Condition:

- **PRED** = **C**
- If **YES**: Proceed with **B**
- If **NO**: Proceed with **A.4**

Node B

B. NVWR Watchout?

- If **NO**: Proceed with **C**
- If **YES**: evaluate **B.1**

B.1 Is organic web conversion low?

Threshold:

- low if $<$ 0.9%

CS handling:

- For market **CS**, the value is aggregated across **AT**, **BG**, **CZ**, **GR**, **HU**, **PL**, **RO**, **SI**, **SK**.

- If country-level aggregation is unavailable, a CS-specific fallback ratio is used.

Fallback for missing organic web conversion:

- If organic web conversion is not available, use overall web conversion.
- Formula: $NVWR / IWWV$ (latest available values from MSF).

Root-cause wording:

- If the fallback is used, refer to it as **Overall Webconversion** (not **Organic Webconversion**).
- If **YES**:
 - Recommendation: **Check website journey**
 - Continue to **B.3**
- If **NO**:
 - Continue to **B.3**

If neither organic web conversion nor fallback overall web conversion is available:

- mark as **N/A**
- Proceed with **C**

B.3 Is paid web conversion low?

Threshold:

- low if $< 0.7\%$

CS handling:

- For market **CS**, the value is aggregated across **AT, BG, CZ, GR, HU, PL, RO, SI, SK**.
- If country-level aggregation is unavailable, a CS-specific fallback ratio is used.
- If **YES**:
 - Recommendation: **Check media campaigns**
 - Proceed with **C**
- If **NO**:
 - Proceed with **C**

If paid web conversion is not available:

- mark as **N/A**
- Proceed with **C**

Node C

C. Watchout in CRM?

- If **NO**: Proceed with **D**
- If **YES**: evaluate **C.1**

C.1 Is prediction a chance?

Condition:

- **PRED = C**
- If **YES**: Proceed with **D**
- If **NO**: evaluate **C.2**

C.2 CRM watchout duration and Sales/Prediction split

Condition flow:

- If CRM watchout duration is **< 3 months**: evaluate **C.3**
- If CRM watchout duration is **>= 3 months** and (**no Sales watchout** or **no PRED = R**): Proceed with **D**
- If CRM watchout duration is **>= 3 months** and (**Sales watchout** or **PRED = R**): evaluate **C.3**

C.3 Are NSC Prospects on track?

Condition:

- actual **>=** benchmark
- If **YES**: evaluate **C.4**
- If **NO**:
 - Recommendation: **Check potential for lead generation.**
 - Proceed with **D**

If NSC Prospects are not available:

- mark as **N/A**
- Proceed with **D**

C.4 Is Share of High Value NVWR OK?

Threshold:

- OK if **>= 40%**
- If **YES**: Proceed with **D**
- If **NO**:
 - Recommendation: **Check potential for prospect nurturing.**
 - Proceed with **D**

Node D

D. Watchout in Sales only OR (IWVV AND Sales only)?

- If **NO**: END
- If **YES**: evaluate **D.1**

D.1 Is prediction a chance?

Condition:

- **PRED = C**
- If **YES**: END
- If **NO**:
 - Recommendation: **Check on Leadquality. If the Leadquality is good: evaluate potential COR measures.**
 - END

Additional Chapter: Media Efficiency

This chapter describes the logic used for the **Media Efficiency** view.

Scope and ordering

- Evaluate all model/market/drivetrain combinations with high Media Cost.
- High-invest threshold: **Media Cost >= 70,000 EUR**.
- Results are sorted descending by **Media Cost**.

CS aggregation rule

- For market **CS**, country-level entries are aggregated across **AT, BG, CZ, GR, HU, PL, RO, SI, SK**.
- The high-invest check for **CS** is applied on aggregated **Media Cost** (sum across these countries).
- For KPI checks in this chapter, existing CS regional aggregation/fallback logic applies.

Step 1: Strong positive plan deviation check

Check whether all of the following are true:

- **IWVV plan deviation >= +20%**
- **NVWR plan deviation >= +10%**
- AND one of:
 - **(Sales plan deviation >= +5% AND Prediction != R)**
 - OR **Prediction = C**

Sales KPI selection:

- For **C1** markets: use **Order Intake - All**.
- For **C3/C4** markets: use **Retail - All**.

Sales plan deviation aggregation detail:

- Evaluate on **Model Range** level (ignore **Model Code**).
- For each relevant date, sum **Actual** and **Benchmark** across all model-code rows of the same model range.
- Use the latest available date aggregate for deviation.

If Step 1 is **YES**:

- Recommendation: **Evaluate shift in other models**
- Continue with Step 2.

If Step 1 is **NO**:

- Continue with Step 2.

Step 2: Cost per NVWR efficiency

Thresholds:

- **BEV <= 200 EUR**
- **NON-BEV <= 100 EUR**

If Step 2 is **YES**:

- If there is no recommendation from Step 1, the model is not listed.
- If Step 1 already produced a recommendation, keep the model listed and continue no further checks.

If Step 2 is **NO**:

- Continue with Step 3.

Step 3: Media Cost Conversion share

Check whether:

- **Media Cost Conversion / Media Cost > 40%**

If Step 3 is **NO**:

- Recommendation: **Evaluate and adjust Media Mix**
- Continue with Step 4.

If Step 3 is **YES**:

- Continue with Step 4.

Step 4: Paid web conversion

Check whether:

- paid web conversion is low (**< 0.7%**).

If Step 4 is **YES**:

- Recommendation: **Check media campaigns**

If Step 4 is **NO**:

- End.

Output behavior

- Only models with at least one recommendation are shown.
- Recommendation text can contain multiple entries joined in sequence when multiple conditions apply.

Visual flow (compact)

Supporting KPI Notes

Organic web conversion

- low if $< 0.9\%$

Paid web conversion

- low if $< 0.7\%$

High Value NVWR Share

- OK if $\geq 40\%$

Cost per NVWR

- BEV efficient if ≤ 200 EUR and Paid Share $< 60\%$
- NON-BEV efficient if ≤ 100 EUR and Paid Share $< 60\%$
- If Cost per NVWR is missing, the cost condition is treated as met. Efficiency is then determined solely by Paid Share $< 60\%$.
- For market CS, Cost per NVWR and Paid Share are evaluated as regional aggregates across AT, BG, CZ, GR, HU, PL, RO, SI, SK.
